

CARDIOVASCULAR

Cardiac surgery is related to surgeries on the heart or the great vessel. This open procedure often requires a cardiopulmonary bypass and is used to treat complications such as valvular, congenital or ischemic heart disease. It also involves with heart transplantation. On the other side, vascular surgery is related to the treatment of disease of the arteries and veins, which are mostly treated with minimal invasive surgery such as angiography and stenting.

Cardiovascular pack

References 02P03

Vi Pha Co surgical drapes specific to cardiovascular surgery provide efficient infection control. The packs are easy to use and can feature:

- Drapes with optimal fluid control for a dry surgery:
 - o Double extra absorbent drape
- Design in Partnership with "foundation du Coeur Alain Carpentier"
- Efficient for operation of 10 hours and more
- Variable option with multiple drapes or single fenestrated drape
- Additional utility drapes for a smaller operating area
- Additional absorbent drape
- Variable accessories options for full procedure

Founded in 2008, **VI PHA Co** provides a large range of disposable medical devices.

With raw materials imported from USA and Europe, Vi Pha Co drapes and gowns offer to surgeons, nurses and patients the best protection and comfort adapted to the high requirements of the operating theater.
